

GLYPHOSATE-BASED HERBICIDES HAVE A LONG HISTORY OF SAFE USE

More Than 40 Years on the Market, Glyphosate-Based Herbicides Are Some of the Most Extensively Studied and Reviewed Products of Their Kind

855 Studies Submitted to Regulators

As part of the registration process, that relate to human or mammalian health, and support the safety of glyphosate when used as directed.¹

160 Countries

Approved glyphosate-based products for use.²

Studies Relevant to EPA's 2017 Cancer Risk Assessment³

Studies: epidemiologic, long-term animal and genetic toxicity

11

110

■ Sponsored by Monsanto

■ Sponsored by other parties

Conclusion:

"Glyphosate is not likely to be carcinogenic to humans," the agency's most favorable rating.

2018 Agricultural Health Study⁴ The Largest Epidemiologic Study on Glyphosate-Based Herbicides Supported by U.S. National Cancer Institute

20 Year Study Period (1997-2017)

Followed over 50,000 Licensed Pesticide Applicators

Conclusion:

"We observed no associations between glyphosate use and NHL [non-Hodgkin's Lymphoma] overall or any of its subtypes."

Regulatory and International Agency Conclusions Post-IARC Support the Safe Use of Glyphosate-Based Herbicides and That Glyphosate Is Not Carcinogenic
