

An Oshkosh Corporation Business

## **JLG Showcases Expanded Solutions Portfolio at the GCSAA Conference & Trade Show**

At the 2026 GCSAA Conference & Trade Show, JLG will present an expanded lineup of equipment and technologies designed to help golf course superintendents, builders and grounds teams work with precision, care and efficiency in sensitive environments.

Visitors to JLG's exhibit in the West Building, Booth #3013 in the GCBAA Pavilion, will experience a broad range of solutions built to address real-world challenges — from moving materials across rugged or turf-sensitive terrain to operating productively in confined or landscaped spaces, and managing fleets more intelligently.

### **Who JLG Is**

As a global leader in access equipment, JLG designs and manufactures machines that help crews safely and efficiently work at height and handle materials across construction, industrial, municipal and specialty applications. Backed by the global resources of Oshkosh Corporation, JLG delivers a diversified portfolio supported by robust training, parts availability and service infrastructure worldwide.

### **Strengthening the Portfolio Through the AUSA Acquisition**

A key highlight of JLG's 2026 exhibit is the inclusion of AUSA equipment, now fully integrated into the JLG portfolio. Acquired in late 2024, AUSA brings nearly 70 years of expertise in compact, all-terrain machines, including dumpers and rough-terrain forklifts engineered for high maneuverability, strong payload performance and dependable operation.

The acquisition significantly expands JLG's ability to serve customers who require compact, purpose-built solutions for demanding environments — strengthening offerings across construction, landscaping, municipal and specialty applications.

### **Equipment on Display: Built for Precision Grounds Work**

For golf course environments, JLG will spotlight compact and versatile solutions designed to support material placement, turf protection and navigation through tightly managed landscapes. The focus is on enabling crews to complete tasks accurately and efficiently while minimizing disruption to course conditions.

#### **JLG® AUSA equipment on display will include:**

- Electric Dumpers – Quiet, zero-emissions solutions ideal for use in noise-sensitive or environmentally controlled areas, offering smooth power delivery and all-terrain capability.
- Articulated and Reversible Dumpers – Highly maneuverable machines engineered for narrow paths, slopes and confined work zones, supporting material movement with minimal surface impact.
- Rough-Terrain Forklifts – Compact yet powerful forklifts designed to move materials efficiently across uneven or soft ground while maintaining stability and control.

These machines are well-suited for applications such as bunker renovation, drainage projects, material transport, facility maintenance and landscape construction, where precision and care are essential.

### **Purpose-Built Solutions for Today's Grounds Crews**

JLG's presence at the 2026 GCSAA Conference & Trade Show underscores its commitment to helping grounds professionals work smarter in sensitive environments. By combining JLG's access expertise with

AUSA's compact material-handling heritage, the company is delivering solutions that support accuracy, productivity and responsible grounds management — without compromising turf or course quality.

Attendees are invited to visit Booth #3013 to see how JLG solutions come together to meet the evolving needs of golf course operations and construction projects alike.
