### **Arkon™ Herbicide Liquid Debuts at the 2024 GCSAA Conference and Trade Show**

**SHAWNEE, Kan. (January 29, 2024)** [PBI-Gordon Corporation](#) will feature [Arkon™](#) Herbicide Liquid — its newest liquid herbicide innovation for post-emergent control of sedges, kyllingas, and other broadleaf weeds — at the 2024 GCSAA Conference and Trade Show (January 29 – February 1 in Phoenix, Ariz.).

PBI-Gordon will be located in booth 2154 at the Phoenix Convention Center. Arkon will be featured alongside other leading PBI-Gordon products for the golf course maintenance industry:

- [Segway®](#) Fungicide SC provides consistent and rapid control of Pythium root dysfunction, Pythium blight, Pythium damping-off, and Pythium root rot.
- [SpeedZone® EW](#) Broadleaf Herbicide for Turf controls more than 90 tough broadleaf weeds, including dollarweed, ground ivy, and spurge.
- [Q4® Plus](#) Turf Herbicide for Grassy & Broadleaf Weeds combines four powerful active ingredients into a single formulation that kills crabgrass and other tough grassy and broadleaf weeds such as foxtail, chickweed, clover, and dandelion.

#### **About Arkon Herbicide Liquid**

In 2023, Arkon™ Herbicide Liquid was approved for use in most U.S. states (excluding California and Alaska). The U.S. Environmental Protection Agency (EPA) previously approved Federal registration for the herbicide.

Now available nationwide, Arkon is labeled for use on established cool- and warm-season turfgrass species across a wide variety of use sites, including golf course greens, fairways, and roughs.

-More-

Utilizing the innovative and proprietary active ingredient Pyrimisulfan, Arkon provides dependable post-emergent control of sedges (yellow, purple, and annual), kyllinga (green false green, cockscomb, and annual), dollar weed, chickweed, henbit, and many other labeled broadleaf weeds. Additionally, research has shown that the liquid herbicide reduces the number and viability of nutsedge tubers.

Arkon is a low-rate, non-phenoxy product. The application rate is as follows:

- 1.2 to 1.7 fl. oz. per 1,000 sq. ft. (3.4 to 4.7 pt. per acre).
- The maximum annual use rate is 2.5 fl. oz. per 1,000 sq. ft. (7 pt. per acre, per year).
- For harder-to-control weeds, two applications at the 1.2 fl. oz. per 1,000 sq. ft. rate at 30 apart should be considered.

### ***About PBI-Gordon Corporation***

With a line of herbicides, fungicides, insecticides, growth regulators, and other products, PBI-Gordon Corporation is a national leader in the professional turf and ornamental management industry. Based in the Kansas City metro area, PBI-Gordon has been in business for more than 75 years and is 100 percent employee-owned.
