

PESSL INSTRUMENTS ADDS METOS TSM TO ITS PORTFOLIO

Pessl Instruments Expands Its Portfolio with Precision Soil Moisture Monitoring Tool **Pessl Instruments adds METOS TSM to its portfolio**

Weiz, Austria, 28.1.2025, Pessl Instruments, a leading provider of precision farming and turf solutions, announces adding METOS TSM, a new soil analysis tool, to its portfolio. This tool brings soil monitoring to a whole new level. It is easy-to-use and gives quick soil analysis without any physical contact with the soil. It helps turf managers check moisture levels in the soil's root zone while on the go with the grass mowers or other machines.

"With METOS TSM, we are empowering course managers to make more informed decisions, improving sustainability, and ultimately delivering better playing surfaces," begins explaining Gottfried Pessl, CEO of Pessl Instruments. *"All our solutions ensure that every decision made on the course is backed by data, allowing for precise, cost-effective management combined with other information like permanent soil moisture, TDR random soil moisture, evapotranspiration through weather stations on the course, and more."*

With over 40 years of agronomic expertise, Pessl Instruments understands the complexities of soil, plant health, and environmental conditions. The deep-rooted knowledge in agriculture enables the company to provide more than just data to the user. It delivers actionable insights that help manage turf with precision.

"For course managers, choosing METOS means staying ahead of potential issues by continuously monitoring their greens. With METOS TSM they will be able to map volumetric moisture content within the root zone, which will help optimize irrigation management, reduce resource wastage,

and improve soil health, all in real-time. We're excited to bring METOS TSM to the turf management market, as it addresses the growing demand for more efficient, data-driven solutions," concluded Mr. Pessl.

For more information about METOS TSM and its capabilities for golf courses and sports fields, visit us at **booth no. 4256 at the GCSAA show in San Diego** or visit metos.global/metos-tsm.

ABOUT METOS by Pessl Instruments

For over 40 years, Pessl Instruments has been offering tools for informed decision-making. A complete range of wireless, solar powered monitoring systems under the METOS brand, and an online platform FieldClimate are applicable in all climate zones and can be used in various industries and for various purposes – from agriculture to research, hydrology, meteorology, flood warning, snow removal, sports turf, smart city and many more.

Over the years, METOS has become a global brand with local support and has managed to reach out to almost every corner of the world. The METOS brand lasts longer, performs better, is easier to use and offers you the lowest total cost of ownership. For more information about Pessl Instruments, visit www.metos.global.
