

## **Prism Worldwide Unveils First Sustainable Anti-Slip Pathway Solution for Golf Courses, Made in the USA**

*Prism has launched CourseGrip pathway mats designed specifically for golf course pathways and bridges based on its technology that converts end of life tire rubber into new polymers.*

**Kirkland, WA** — December 2, 2025— In a groundbreaking step towards enhanced sustainability within the golfing industry, Prism Worldwide is proud to announce the launch of its innovative anti-slip product specifically designed for golf course pathways and bridges. This pioneering material, crafted in the USA and incorporating 30% of polymer derived from end-of-life tire rubber, is set to transform the way golf courses approach both safety and environmental stewardship while providing significant cost savings compared to current offerings.

As the demand for sustainable practices in all industries intensifies, golf courses are now seeking eco-friendly solutions that do not compromise on quality or safety. Prism Worldwide's new product offers a robust anti-slip surface that not only meets these requirements but excels in its performance against the elements. The material is engineered to withstand severe weather conditions and resist damage from UV sunlight, prolonging its lifespan and reducing maintenance costs.

"We're excited to introduce a product that aligns with both golf's environmental goals and the need for high-performance anti slip pathways at golf courses," said Bob Abramowitz, CEO at Prism Worldwide. "By manufacturing in the USA and utilizing polymers derived from end-of-life tire rubber, we not only help reduce waste but also provide a durable and safe surface, all while allowing operations to realize significant cost savings over time compared to traditional materials."

Prism Worldwide's commitment to sustainability does not end with the advanced materials used in its new product. The company remains dedicated to incorporating eco-conscious practices throughout its operations, demonstrating leadership in both innovation and environmental responsibility.

This innovative anti-slip mat will be officially unveiled at the Golf Course Superintendents Association Trade Show in Orlando, Florida in February 2026, offering industry professionals a first-hand look at this exciting advancement in golf course sustainability.

### **About Prism Worldwide**

Prism was founded on the principle that there should be better use for end-of-life (ELT) tires. We recognize that to solve this long-standing issue, we need solutions that provide performance-oriented products. This requires that we address the problem differently.

Developed and patented in the United States, Prism's technology and products are American-made and American-sourced. Prism provides a cost-effective solution that helps end users increase profitability by using sustainable materials.

We are bringing new patented technology to the market by producing polymer intermediates derived from end-of-life tire rubber. These performance solutions for rubber compounding, thermoplastic elastomer (TPE) markets (Ancora) and rubber modified plastics polymer markets (Ennova) are sustainable and circular, creating higher value uses for end-of-life tires and offering a route to Making Tires More Circular.
