## **SiteOne® Expands LESCO® Agronomic and Equipment Solutions for Golf Course Turf Management**

*New herbicide, fertilizer, seed and equipment offerings give superintendents more precision and consistency across the season*

**ROSWELL, Ga. February 3, 2026** — SiteOne® is launching a new lineup of LESCO® products and turf-maintenance equipment developed specifically for the evolving demands of golf course turf management. The portfolio includes new herbicides, fertilizers, seed and a battery powered self-propelled spreader, giving superintendents additional tools to manage weed pressure, support turf establishment and improve application efficiency while maintaining high-quality playing conditions.

“Superintendents need solutions that perform when timing, turf safety and consistency matter most,” said Lee Collins, Golf Director at SiteOne. “These new LESCO products give turf teams more options to address real-world challenges across the season without overcomplicating their programs.”

### **Herbicides**

The new LESCO herbicide offerings are designed to give superintendents more flexibility across application windows, turf types and regulatory environments. These solutions support fast, effective weed control with strong turf safety, including options for cool- and warm-season turf and non-2,4-D formulations.

- **LESCO® Momentum XPD:** Provides fast, non-2,4-D broadleaf weed control in cool-season turf with reliable performance during spring and fall when weeds are slow to grow.
- **LESCO® Quin-Way™ Ultra:** Provides improved crabgrass control, including performance through the 3–5 tiller stage, with excellent turf safety under challenging conditions.
- **LESCO® Prosecutor® ProLong Total:** Delivers rapid knockdown and extended residual control, preventing new weeds from emerging for up to six months.
- **LESCO® Momentum Southern:** Offers dependable broadleaf weed control with strong turf safety across warm-season grasses.
- **LESCO® Mesotrione 0.08% Starter Fertilizer Plus Pre-Emergent Herbicide:** Prevents hard-to-control weeds while establishing new turf with a 35% nitrogen slow-release formula.

### **Fertilizers**

New LESCO fertilizer offerings focus on improving nutrient efficiency and consistency across fine turf areas. These products are designed to deliver more uniform coverage, faster turf response and reliable performance under demanding conditions, helping superintendents optimize fertility programs without over-application.

- **LESCO® Nutra-Tech:** Delivers fast turf response through enhanced uptake technologies to support plant health and consistent performance.
- **LESCO® Spar-Tech:** Uses small-particle fertilizer technology to improve distribution uniformity and help efficiently correct nutrient deficiencies.

### **LESCO® Prodigy Creeping Bentgrass Seed**

LESCO® Prodigy Creeping Bentgrass Seed is engineered for consistent performance on greens, tees and fairways. Its uniform growth habit and shoot density create a tight, plush canopy for championship-level roll and speed. It is designed to help courses maintain playability throughout the season.

### **LESCO® Battery Powered Self-Propelled Spreader**

The LESCO® Battery Powered Self-Propelled Spreader combines an 80-lb capacity with self-propelled operation to make material applications less labor-intensive and more accurate. Its durable stainless-steel frame and adjustable handle provide comfort, control and consistent spread patterns. The battery-powered design eliminates the hassle of cords or gas.

SiteOne will showcase the entire new product lineup at the 2026 GCSAA Conference and Trade Show at Booth 2924 in the West Building. Superintendents can connect with SiteOne's golf team to review product attributes, recommended programs and course-specific solutions.
